

I favor establishment of the Radio Teletype broadcast proceeding. Teletype has been used to aid the deaf over telephone lines for ordering medical supplies, making appointments etc. The use of teletype machines or computers with radio teletype capability will add another useful function so that the deaf will also have access to news and other information over these radio frequencies. I have had a commercial first class commercial operator's license and a commercial telegraph license as well as an Extra Class Amateur license for over 60 years.
